A fan designed to meet the needs of Social Housing

**Landlord**
Can be installed in a kitchen or bathroom. No filter required, so low maintenance, and comes with up to 7 years warranty. Quality guaranteed from the leading brand.

**Contractor**
Quick and easy to install with simple LED display and 3 button menu for all commissioning and data gathering.

**Resident**
Powerful enough to remove moist air ensuring good indoor air quality and a healthy home. At the same time quiet enough not to disturb and very energy efficient.
Smart Sense™
Intelligent technology

Easy to Read Display
The alpha numeric LED display on Revive can display a wide range of data. It is clear and easy to read meaning commissioning and data gathering becomes much easier.

Records Energy Use
The intelligent Smart Sense™ technology can track the Wattage used by Revive and provides real time data via the intuitive interface. This means landlords can reassure residents of the low running costs.

Day Logger
Track how many days the fan has been running for, giving you the peace of mind that the unit is being used as intended.
Ambient Response
Humidity
Vent-Axia’s ambient response humidity sensor avoids nuisance tripping and therefore increases resident acceptability while protecting the property from damaging condensation and mould.

Multiple Config. Option
Using flexible Smart Sense™ technology, Revive can be commissioned to meet the needs of the property and with resident acceptability in mind. Quickly and easily select from a range of options, giving bespoke solutions where performance or noise is key.

Installer Friendly Interaction
Using just 3 simple buttons, along with the LED display the intuitive menu makes it easy to commission Revive. Smart Sense™ technology even tells the LED display which orientation to use depending on whether it is wall or ceiling mounted.
Multi-Vortex™
Innovative airflow technology makes Revive best in class

Discreet Grille
A tile front does not mean poor airflow! Performing to design intent, residents will have a quiet, unobtrusive fan without a spinning impellor visible. The aesthetically pleasing tile front Revive will stay cleaner than open grilled alternatives.

Bellmouth Entry
Drawing air into the fan, the clever bellmouth design feature allows air to enter the fan fluidly and silently. This feature improves efficiency and ensures residents are not disturbed by air noise.

Hybrid Impellor
With an innovative fusion of axial and mixed flow technology, our design team have developed a high pressure impellor that is powerful and efficient, yet quiet, delivering on the unique needs of the social housing environment.
Open Grille Option

An open grille option is also available which offers an additional choice where the tile grille is not required. Using a technology leading aerofoil blade design, the air moves efficiently and silently over the blades, ensuring resident comfort.

Octo-vortex Chamber

The 8 chamber conical cylinder straightens the air to develop better pressure. The design also helps to repel dirt enabling the fan to be filterless, so landlords can install powerful fans with low maintenance requirements.

Saw-tooth Design

Another sound reducing feature, the saw-tooth design on the impellors breaks up the sound spectrum, ensuring the resident is not disturbed by the fan and reducing the chances of tampering.
Peace of mind
Revive can help ensure resident satisfaction and reduce the need to re-visit the property.

Quiet Operation
A quiet fan is essential for resident acceptability. Compared to noisy centrifugal alternatives, the Revive discreetly removes moisture and stale air, leaving a comfortable home environment.

Easy to Install
Installers need a fan that is quick and easy to install. Revive does not disappoint, with easy cable entry and multiple fixing points, it makes the job simple.

Energy Saving
The Lo-Carbon Revive is optimised to provide the best possible performance while using as little energy as possible. This lessens the impact on energy bills and reduces the carbon footprint of the home.
Filterless and Repels Dust

Revive’s Multi-Vortex™ technology does not require a filter, and the highly sculpted interior actively repels dust and does not allow it to settle, meaning it won’t get clogged up.

Tamper Proof

From the discreet flat front, to the ambient response humidistat, Revive is designed to operate without bothering the householder. With the addition of a silent running option, the resident will hardly notice the fan is there.

Small Footprint

Nobody wants a large fan that takes up a lot of wall space. The clever Multi-Vortex™ technology allows the fan to be just 190mm high by 190mm wide.
Made in Britain

We design, develop and manufacture our fans in the UK. We have reduced transport related carbon emissions by up to 15 Tonnes per year and invested in UK skilled jobs, increasing our local workforce and providing a boost to the local job market.

A Family of Fans

It is not always true that one fan can fit all. This is why we have developed Revive as part of a family of fans. Alongside the Lo-Carbon Response, this family of fans means you can specify the appropriate fan for the application.

80 Years of Heritage

80 years of heritage, innovation and product development have made Vent-Axia the market leader in its field. From the first Bakelite fan in 1936, to the App controlled fans of today, Vent-Axia is a name you can trust.
