PLEASE RETAIN THESE INSTRUCTIONS WITH THE PRODUCT.
IMPORTANT SAFETY INFORMATION

PLEASE READ THESE INSTRUCTIONS CAREFULLY BEFORE USING THE UNIT.

1. This appliance is not intended for use by persons (including children) with reduced physical, sensory or mental capabilities, or lack of experience and knowledge, unless they have been given supervision or instruction concerning use of the appliance by a person responsible for their safety.

   Young children should be supervised to ensure that they do not play with the appliance.

2. Do not attempt to remove the covers of this unit. High Voltage is present in this unit.

NEW PROPERTY FILTER MAINTENANCE

When fitted to a new build property the supply and exhaust filters should be checked at one month intervals for the first six months.

Disposal

This product should not be disposed of with household waste. Please recycle where facilities exist. Check with your local authority for recycling advice.

Product Description

**Sentinel Kinetic, Sentinel Kinetic F, Sentinel Kinetic Plus & Sentinel Kinetic High Flow**

The Vent-Axia Sentinel Kinetic, Sentinel Kinetic F, Sentinel Kinetic Plus & Sentinel Kinetic High Flow Mechanical Ventilation/Heat Recovery (MVHR) are heat recovery units designed for the energy efficient ventilation of houses and similar dwellings, conforming to the latest requirements of the Building Regulations document F 2010.

The units are designed for continuous 24 hour exhaust ventilation of stale moist air from bathrooms, toilets and kitchens. As the stale air is extracted, a heat exchanger within the unit transfers up to 90% of the heat into the supply air entering the bedrooms and lounge.
**Sentinel Kinetic Range Summer By Pass Models.**

The Sentinel Kinetic B, BH, FH, Plus B, Plus BH and High Flow are fitted with a Summer By Pass (SBP) and will provide energy-free cooling when the house temperature and ambient temperature allows.

*Note that the volume of air provided by this ventilation system is a fraction of that required for space heating or space cooling and will not in itself be sufficient to cool a room. It will however, provide a contribution and make a difference.*

There are three operating modes, Normal, Evening Purge and Night-time purge.

**Normal Mode.**

Air flow rate is determined by sensors, boost and timing settings, otherwise is normal rate.

If the room is warmer than the set (shown as “indoor”) temperature (i.e. you need the room to be cooler) and the outdoor air is cooler than the actual room temperature (i.e. the outdoor air could cool your room) then the SBP will open and the unit will supply cooler air to your room.

Note that the above only applies whilst the outdoor air temperature is above 14 C (adjustable) in order to prevent cold draughts.

The set (“indoor”) temperature should be set 2 or 3 degrees higher than the central heating thermostat and 2 or 3 degrees below any air conditioning thermostat if fitted. This will prevent any clash between the separate systems.

**Evening purge Mode.**

Intended for use as the outdoor temperature cools in the evening, but reverts to normal control after a set time so that any increase in noise is avoided overnight.

Air flow rate is always at boost.

The bypass closes and the purge stops if the temperature conditions described in Standard Mode are no longer met or 5 hours after the bypass opened.

**Night-time purge Mode.**

Intended for use as the outdoor temperature cools in the evening and continues through the night when cooling is a higher priority than any increase of noise. Note that the air noise in your system is influenced by the ducting design and layout and the size and type of vents used in the rooms. If improvements are required speak to your installer.

Air flow rate is boost.

The bypass closes and the purge stops if the temperature conditions described in Standard Mode are no longer met.
Models

- 438342 - Sentinel Kinetic V without summer bypass.
- 438222 - Sentinel Kinetic B Right right handed with summer bypass.
- 438222L - Sentinel Kinetic B Left left handed with summer bypass.
- 443319 - Sentinel Kinetic BH Right right handed with summer bypass and integral humidity sensor.
- 443319L - Sentinel Kinetic BH Left left handed with summer bypass and integral humidity sensor.
- 408167 - Sentinel Kinetic FH Right right handed with summer bypass and integral humidity sensor.
- 408169 - Sentinel Kinetic FH Left left handed with summer bypass and integral humidity sensor.
- 443028 - Sentinel Kinetic Plus B Right right handed with summer bypass and integral humidity sensor.
- 447938 - Sentinel Kinetic Plus B Left left handed with summer bypass and integral humidity sensor.
- 408449 - Sentinel Kinetic High Flow Right right handed with summer bypass and integral humidity sensor.
- 408451 - Sentinel Kinetic High Flow Left left handed with summer bypass and integral humidity sensor.

Accessories

- 441838 - Sentinel Kinetic Plug-in integral humidity sensor
- 441865 - Wireless enable kit (consists of wireless receiver and one wireless switch).
- 437827 - Additional wireless switch (up to four may be connected).
- 441780 - Vent-Wise accessory pack – requires sensors.
- 442367 - Monza System Cooker Hood 600mm wide
- 442368 - Latina System Cooker Hood 900mm wide
- 443283 - Wired Remote Control.
- 447340 - Opto-Coupler
- 409761 - Spigot Adaptor Kit 200mm (High Flow)

A range of sensors can be used to manage system demand and control the ventilation rate. These include an internal humidity sensor, humidity sensors for independent mounting in rooms, wireless receiver and wireless boost switches, CO₂ sensor, Ventwise sensors, manual switches and pull cords. For these alternative control options, see [www.vent-axia.com](http://www.vent-axia.com)
Control Unit Display

The Control Unit is located at the front of the Sentinel Kinetic unit. The Control Unit provides the user interface for commissioning and monitoring purposes.

![Control Unit Display](image)

**Figure 3: Control Unit**

Display

The main display is an LCD with automatic backlight, which is turned off to minimise power consumption when the unit is operational (see Overview on page 9).

Normal Airflow

30%

Buttons

Four buttons on the Control Unit provide the controls for configuring and monitoring the unit.

### Table 1: Control Unit Buttons

<table>
<thead>

For all other technical details, please see the Product Catalogue or our website at [www.vent-axia.com](http://www.vent-axia.com).
Powering Up the Unit

**Switching On** (The unit is designed to run continuously)

To switch the unit on:

1. Switch on the power at the mains supply isolator feeding the unit.
2. Following switch-on, the fan motors will start and the Control Unit will display a series of startup screens, described below.

**Switching Off**

To switch the unit off: at the unit’s local isolator, turn the power off.

Startup Screens

**Sentinel Kinetic Version Screen**

The Sentinel Kinetic Version screen displays the firmware version number for 3 seconds.

No adjustments are possible on this screen.

**Language Screen**

The Language screen displays the language used for the screens. It is typically displayed for 5 seconds, or longer if changing the setting.

**Control Mode Screen**

Selects between Control Mode 01 operation described herein and the alternative Control Mode 02 described in Appendix One.

**Airflow Units Screen**

The Airflow Units is a percentage of the unit’s maximum flow.

**Wireless Control Screen**

The Wireless Control screen automatically displays whether the wireless boost control switch is fitted. It is typically displayed for 3 seconds.

**Humidity Sensor Screen**

The Humidity Sensor screen displays whether the humidity sensor is fitted. It is typically displayed for 3 seconds.
Operation and Monitoring

Overview

When the Sentinel Kinetic unit has been installed and commissioned it should require no further intervention in order to operate, unless external switches are used to control on/off/boost, etc, or BMS control requires user action.

Cooker Hood

100 %
User Menu Screens

From the Normal Airflow screen, press the button to access the rest of the User Menu screens.

Changing the value of a setting (if adjustable) is typically a 3-step procedure:

1. Press to select the setting (the setting will flash).
2. Use the or buttons to adjust the value. To scroll quickly, press and hold the or buttons for more than 2 seconds.
3. Press again to enter the new settings and move to the next screen.

To return to the Normal Airflow screen, press the button repeatedly or press and hold the button for 5 seconds. Alternatively, the Normal Airflow screen will be restored if no buttons are pressed for two minutes (timeout). Settings are stored in the memory and will be retained in the event of mains power supply failure.

Low Airflow / Normal Airflow / Boost Airflow Screen

When the start-up screens are finished, the Low or Normal screen is displayed showing operating status (Low Airflow X % or Normal Airflow X % or Boost Airflow X %).

The Normal screen displays the rate of normal airflow (supply air) through the unit.

If the installation has proportional sensors or an internal humidity sensor fitted, and any of these are boosting the airflow, an symbol will be displayed.

When the summer bypass is active, the normal screen top line will alternate (for 3 seconds) with Summer Bypass.

An interval can be set, see page 40 of the Installation and Commissioning manual, at which the unit reminds the user to check the filters. This will be 6, 12 or 18 months. The normal screen top line will include Check Filter as a reminder to check and, if necessary, clean or replace the filters.

When this has been done, press and hold the and buttons for 5 seconds to reset the automatic message.
Set Clock Screen

From the Normal Airflow screen, simply press the button once to access the Set Clock screen.

The Set Clock Control screen enables you to change the clock settings. The clock retains its settings for approximately two weeks without mains power, after which it will need resetting when power is reconnected.

Values are DDD HH:MM.

Return to the normal display by pressing the button or leave to timeout and return automatically after 2 minutes.

The unit will not automatically switch for Daylight saving time.

Summer Mode Screen

From the Set Clock screen, simply press the button twice to access the Summer Mode screen.

If the unit is a summer bypass model, the Summer Mode screen enables you to switch the summer bypass control on or off. This screen is only displayed when the bypass is fitted.

Options available are On (default) and Off.

Return to the normal display by pressing the button or leave to timeout and return automatically after 2 minutes.

Indoor Temp Screen

From the Summer Mode screen, simply press the button 3 times to access the Indoor Temp screen.

The Indoor Temp screen enables you to choose the target room temperature in degrees Centigrade – only displayed when the bypass is fitted.

Selectable range is 16-40 (25 default).

Return to the normal display by pressing the button or leave to timeout and return automatically after 2 minutes.
Boost & Purge Screens

Boost Screen

Pressing the button activates boost airflow mode when extra ventilation is required.

<table>
<thead>
<tr>
<th>No. of presses</th>
<th>Boost action (Control Mode 01)</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>Boosts for 30 minutes</td>
</tr>
<tr>
<td>2</td>
<td>Boosts for 60 minutes</td>
</tr>
<tr>
<td>3</td>
<td>Boosts continuously</td>
</tr>
<tr>
<td>4</td>
<td>Back to Normal flow rate</td>
</tr>
</tbody>
</table>

N.B Additional airflow modes are available from the button when Control Mode 02 is selected in the start-up screens see Appendix One for further details.

If the wireless boost option is fitted, this can be triggered from the wireless transmitter/boost switch.

If the installation has switch sensors, is wired to the lighting, has Vent-Wise sensors or if the internal time switch is set for periodic operation, operation will change from normal to boost automatically. Pressing the button will reveal a code to show which device has activated boost.

s1 = Switch S/W1  
s2 = Switch S/W2  
s3 = Switch S/W3  
s4 = Switch SW4  
s5 = Switch SW5  
v1 = Vent-Wise Input S/W1  
v2 = Vent-Wise Input S/W2  
v3 = Vent-Wise Input S/W3  
ls = Switched live (LS)  
w1-4 = Wireless controller  
c1-3 = Internal Time switch

If running on boost due to pressing the button, a device will ‘take over’ the boost. Flow will return to low / normal when that device switches off. If a number of different devices are calling for boost flow, the unit will run at boost until the last one has reverted to normal.
Purge Screen

Pressing and holding the button for 5 seconds activates purge mode when you want to purge air from the building. The unit will revert to normal flow by pressing and holding the button again for 5 seconds. If the wireless boost option is fitted, this can be triggered from the wireless transmitter/boost switch.

Purge mode runs the fans at full speed for 2 hours (120 minutes). The Purge screen displays a countdown of the time remaining.

Cooker Hood Boost Screen

There is a separate connection for a cooker hood control which allows the boost level to be higher when triggered by a Cooker Hood.

Low Airflow Screen

Low Airflow mode is activated when the Normal Airflow is set to Off, (see page 33 in the Installation and Commissioning manual for set up details).

The Normal Airflow mode can be set to run during the daytime i.e. from 6am to 11pm, the Low Airflow mode will then run during the night from 11pm to 6pm.

Status Message Screens

The status message screens override the Normal Airflow and other user screens, and display status and key operational conditions (temperatures or pressures, etc.) according to how the unit has been configured. If there is more than one status item to be displayed, the highest priority message is shown.

These screens are displayed in a loop during normal operation of the unit, either after displaying the start-up screens, or when commissioning has been completed. After a few seconds the display backlight is turned off in order to minimise power consumption. The and buttons can be used to stop the loop sequence in order to display individual screens for a longer period with the backlight turned on, if required.

Dryout Mode Screen

The Dryout Mode screen displays the time remaining for the building to dry out. The unit runs at maximum flow for 1 week.

Defrost Active Screen

The Antifrost screen is only displayed if a summer bypass is fitted. In installations where a negative pressure is not permitted during antifrost operation, set this to bypass mode.

Available options: **Airflow Mode** (default) and **Bypass Mode**.

**Airflow Mode** - When the supply air temperature is between 0° and -20°C, antifrost will automatically activate. This will reduce the supply airflow rate and increase the extract airflow rate to prevent frost forming on the heat exchanger. During antifrost operation the supply motor can stop for 15 minutes and run for 45, depending on the temperature below 0°C. If the supply air temperature is -20°C or below the supply fan switches off and the extract fan continues to run at reduced rate to prevent frost forming on the heat exchanger.

**Bypass Mode** - While the supply air temperature is below 0°C, the antifrost mode will automatically activate. This mode will open the bypass to prevent frost forming on the heat exchanger.

Room Too Cold Screen

The Room Too Cold screen displays the status of the fan. If the heating system in the building fails or is switched off and the internal temperature drops below 5°C, the unit will stop running so as to not bring cold air into an already cold house. The unit will start up every hour and will run for a short time to measure the temperature of the property. When the temperature rises, e.g. the heating system is switched back on, the unit will restart and continue normal operation.

Bottom line of display may be (**Fan Off, Fan Restarting**).

BMS Screen

The BMS screen shows if a Fan Off command has been received from a Building Management System (BMS), if used.

A **Fan Off** command could be received from the BMS in the event of a fire alarm.
Maintenance

Caring for the Unit

Heat recovery units, by their very nature, require regular maintenance. The Sentinel Kinetic has been designed to facilitate access to enable maintenance to be carried out easily.

Filter Maintenance

<table>
<thead>
<tr>
<th>Item</th>
<th>Action</th>
</tr>
</thead>
<tbody>
<tr>
<td>Fan Filters</td>
<td><strong>When the unit displays “Check filters”.</strong> This is a reminder to ensure that the filters are not so dirty that they are blocking the airflow or allowing dirt to pass through. The rate at which the filters become dirty will vary hugely depending on the environment and the activity within the property. <strong>1.</strong> Open the filter flaps and remove the 2 filters. <strong>2.</strong> Clean gently by tapping or carefully using a vacuum cleaner if necessary. <strong>3.</strong> Replace the filters. <strong>4.</strong> Close the filter flaps. <strong>5.</strong> Reset the automatic message, press and hold the ( \bigcirc ) and ( \bigtriangleup ) buttons for 5 seconds.</td>
</tr>
</tbody>
</table>

12 Monthly Maintenance

<table>
<thead>
<tr>
<th>Item</th>
<th>Action</th>
</tr>
</thead>
<tbody>
<tr>
<td>Fan Filters (Interval to suit environment)</td>
<td><strong>Change the Fan Filters depending on which environment the unit has been installed; urban, suburban or rural.</strong> <strong>1.</strong> Open the filter flaps and remove the 2 filters. <strong>2.</strong> Insert the replacement filters. <strong>3.</strong> Close the filter flaps. <strong>4.</strong> Reset the automatic message, press and hold the ( \bigcirc ) and ( \bigtriangleup ) buttons for 5 seconds.</td>
</tr>
</tbody>
</table>
| Unit & Heat Exchanger Cell | **Inspect and clean the unit**  

1. **Isolate the mains power supply.**  
2. Remove front cover from the unit.  
3. Remove the 2 filters.  
4. Slide out the heat exchanger.  
5. Wash the outer cover and heat exchanger in warm water using a mild detergent and dry thoroughly.  
**NOTE: Keep water away from all electrical components and wiring within the unit.** |
| Motors                | **Inspect the motors for build-up of dust and dirt on the impeller blades, which could cause imbalance and increased noise levels.** Vacuum or clean if necessary. |
| Condensate Drain      | **Check the condensate drain tube is secure and clear of debris.** Clean if necessary. |
| Fastenings            | **Check that all unit and wall-mount fastenings are sufficiently tight and have not become loose.** Re-tighten if necessary. |

Troubleshooting

Diagnosing a Problem

In the event of a problem, always troubleshoot the unit according to:

- **Fault code** displayed on the Control Unit or Remote Wired Control.
- **Fault LED** if connected.

If no indications are displayed, then troubleshoot problem according to the fault symptom as described in the following tables.

**Service/Fault Code Screens**

The Service screen is displayed, alternating with the Fault Code screen, when a fault has caused the unit to switch off and you must phone the telephone number displayed on the screen for assistance.

The Fault Code screen is displayed, alternating with the Service screen, when a fault has occurred. Take note of the fault code when reporting a fault.

For assistance contact the service provider and quote the fault code number. The following fault codes numbers may be displayed. Code numbers are added together if more than one is detected.

*Table 2: Fault Codes*

Appendix One: Control Mode 02 Description

Overview

The functional differences described in this Appendix are available when Control Mode 02 is selected from the start-up screens. Control Mode 02 assigns alternative functions to certain wiring Terminal Connections (described in Appendix One of the Installation and Commissioning Manual) and allows additional airflow settings to be accessed via the \( \text{button} \) on the front of the Kinetic unit or remote control as shown below:

Airflow Mode Selection

The following switching Functions are available via the \( \text{button} \) with Control Mode 02:

<table>
<thead>
<tr>
<th>No. of presses</th>
<th>Airflow Mode (Control Mode 02)</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>Low</td>
</tr>
<tr>
<td>2</td>
<td>Normal</td>
</tr>
<tr>
<td>3</td>
<td>Boosts 30 minutes</td>
</tr>
<tr>
<td>4</td>
<td>Boosts 60 minutes</td>
</tr>
<tr>
<td>5</td>
<td>Boosts continuously</td>
</tr>
<tr>
<td>6</td>
<td>Cancel</td>
</tr>
</tbody>
</table>

Press \( \text{button} \) 10 seconds after last press to cancel and return to normal operation.

If the wireless boost option is fitted, this can be triggered from the wireless transmitter/boost switch.

If the installation has switch sensors, is wired to the lighting, has Vent-Wise sensors, Vent-Wise momentary switch or if the internal time switch is set for periodic operation, operation will change from normal to boost automatically. Pressing the \( \text{button} \) will reveal a code to show which device has activated boost.

\[ s4 \] = Switch SW4
\[ v1 \] = Vent-Wise Input S/W1
\[ v2 \] = Vent-Wise Input S/W2
\[ v3 \] = Vent-Wise Input S/W3
\[ ls \] = Switched live (LS)
\[ w1-4 \] = Wireless controller
\[ c1-3 \] = Internal Time switch

If running on boost due to pressing the \( \text{button} \), another device may ‘take over’ the boost. Flow will return to normal when that device switches off. If a number of different devices are calling for boost flow, the unit will run at boost until the last one has reverted to normal.
## Appendix Two: Spare Filters

<table>
<thead>
<tr>
<th>Model</th>
<th>Filter Part no.</th>
<th>Grade</th>
</tr>
</thead>
<tbody>
<tr>
<td>Kinetic V, B &amp; BH</td>
<td>442356 (PK2)</td>
<td>G3</td>
</tr>
<tr>
<td></td>
<td>444199 (Single)</td>
<td>M5</td>
</tr>
<tr>
<td>Kinetic FH</td>
<td>409764 (PK2)</td>
<td>G3</td>
</tr>
<tr>
<td></td>
<td>472153 (Single)</td>
<td>M5</td>
</tr>
<tr>
<td>Kinetic Plus and Kinetic High Flow</td>
<td>403702 (PK2)</td>
<td>G3</td>
</tr>
<tr>
<td></td>
<td>444201 (Single)</td>
<td>M5</td>
</tr>
</tbody>
</table>
The Vent-Axia Guarantee

Applicable only to products installed and used in the United Kingdom. For details of guarantee outside the United Kingdom contact your local supplier.

Vent-Axia guarantees its products for two years from date of purchase against faulty material or workmanship. In the event of any part being found to be defective, the product will be repaired, or at the Company’s option replaced, without charge, provided that the product:-

- Has been installed and used in accordance with the instructions given with each unit.
- Has not been connected to an unsuitable electricity supply. (The correct electricity supply voltage is shown on the product rating label attached to the unit).
- Has not been subjected to misuse, neglect or damage.
- Has not been modified or repaired by any person not authorised by the company.

IF CLAIMING UNDER TERMS OF GUARANTEE

Please return the complete product, carriage paid to your original supplier or nearest Vent-Axia Centre, by post or personal visit. Please ensure that it is adequately packed and accompanied by a letter clearly marked “Guarantee Claim” stating the nature of the fault and providing evidence of date and source of purchase.
